| Year | $\$ 200,000$ <br> Income Marginal Tax Rate | $\$ 50,000$ <br> Income Marginal Tax Rate |
| :--- | :--- | :--- |
| 1961 | $89 \%$ | $59 \%$ |
| 1971 | $70 \%$ | $50 \%$ |
| 1981 | $68 \%$ | $48 \%$ |
| 1991 | $31 \%$ | $28 \%$ |
| 2001 | $39 \%$ | $28 \%$ |
| 2011 | $35 \%$ | $25 \%$ |

The first column (income tax rates) in the table shows the current rates as of 2012. All these rates are due to rise by about 3 or 4 percent in 2013, unless Congress makes a law to stop them from increasing. The President appears ready to sign a law that would keep these rates from going up for all but the top earners ( $35 \%$ rate). The second column is the rate people pay on profits earned from stock or bond investments. The President is ready to allow the $0 \%$ capital gains rate to rise to $10 \%$ and the $15 \%$ rate to go to $20 \%$.

The graph shows the top federal income tax rates from 1920 until today.

This table shows the top marginal tax rates for two different income levels over the last 50 years.
